Education

Hunter College CUNY

Bachelor's in computer science

Expected: Dec 2026

Relevant Coursework: Data Structures and Algorithms, Computer Architecture, AI/ML, Statistics, Computer Theory

Skills

Programming Languages: Python, JavaScript, C++

Technologies: Sci-kit learn, TensorFlow, AWS, Node.js, React, React Native, Django, Pandas, MongoDB, Firebase.

Work Experience

Essent AI

New York, NY

Lead AI/Web Developer

Jun 2024 – Jun 2025

- Presented technical solutions to 15+ clients and managed team meetings, collaborated on UI/UX design using Figma to enhance user experience.
- Led a team to develop AI software solutions using Sci-Kit, TensorFlow, Pandas, and the ChatGPT API, integrated with React and Django for seamless web functionality.
- Integrated software components and managed third-party program usage to ensure full compatibility across platforms.

YC - Hackathon

San Francisco, CA

Participant

Jan 2026

- Participated in a competitive YC-hosted hackathon on full-stack AI agents, collaborating with other founders and engineers in a high intensity 24-hour environment.
- Built Gryffin, an execution aware AI coding agent designed to automatically test, debug and iterate on code, reducing manual debugging effort by 60%
- Designed a Lang-Graph system to monitor multiple agents, for understanding errors, maintaining context, debugging the codebase, Reducing hallucinations by 30%.

Reality Labs AI

New York, NY

Software Development Intern

Sep 2022 - Dec 2022

- Led a team of 3 in developing a job posting website using React, Firebase, NodeJS, and SQL, following agile methodologies.
- Completed assigned tasks 20% ahead of schedule by proactively organizing a kickoff meeting to assess teammates' strengths, breaking down tasks for faster execution, and seeking guidance from product managers and senior developers.
- Contributed to delivering a high-quality product used by companies to post projects and jobs on the Radical-AI platform, resulting in a 15% increase in user engagement.

Projects

[Gryffin – AI powered development pipeline tool](#) | Y Combinator Full-Stack Hackathon | Jan 2026

- Developed an intelligent **CLI application** that automates system design and architecture generation, decomposing apps into **10–30 major tasks** and cutting initial planning time by **~60%**.
- implemented an execution aware feature that will automatically run tests to catch bugs and errors in code, delivering **highly** functional code with minimal post-generation fixes, reducing debugging fatigue by **45%**.
- Designed a custom context-building system with multiple agents running in parallel to improve consistency and reliability of code generation, increasing code generation time by **15%**.

[Flowman](#) – Startup

- Built a Workflow Management App SaaS using React and Django, actively used by 50+ Beta testers, combining Tasks Tracking Collaboration and AI-powered Features.
- Designed and deployed a Django REST backend with JWT authentication, Web Sockets, and AWS S3, improving file management efficiency by 40%.

[Orbis](#) – An Autonomous Project manager (Private Repo)

- Built Orbis, an AI-powered autonomous project management platform that converts raw ideas, meeting notes, and documents into structured PRDs, epics, sprint plans, and engineering tasks, reducing project planning overhead by an estimated **60%**.
- Engineered a multi-agent workflow orchestration system integrating LLM pipelines, contextual memory, and task decomposition to automate product management workflows from ideation to execution.
